

Assignment -2

Python Programming

Question-1:

'Build a python code, assume you get temperature and humidity values (generated with random function to a variable) and write a condition to continuously detect alarm in case of high temperature.'

PROGRAM:

```
import random from
time import sleep def
generate_values():
    temperature = random.randint(10, 50)
    humidity = random.randint(10, temperature)
    return humidity, temperature humidity =
    temperature = 0 while temperature < 45:
        humidity, temperature = generate_values()
        print('Humidity:', humidity, 'Temperature:', temperature)
    sleep(0.50) print('High Temperature Detected')
```

OUTPUT:

```
Humidity: 12 Temperature: 24
Humidity: 25 Temperature: 28
Humidity: 26 Temperature: 46
High Temperature Detected
```
